

OMNEX INDIA started in the year 1996 with India Headquarters in Chennai, known as the Detroit of the East. Over the last 26+ years, our team has grown to one of the largest offices in the company with more than 490 employees who work out our offices in Chennai, Pune, Bangalore and Gurgaon, Delhi.

We started our journey in India along with FORD starting their operations. The quality movement was in its infant stages, Automotive quality was very new, and we worked with the who's who of Automotive Supply chain. We started working with the erstwhile Mahindra-FORD (later christened as Ford India) till late 2022 when Ford exited India operations. It is remarkable to note that we have worked with many product launches since early 1997, working with the 3 major OEMs- Ford, TATA and Maruti. We had the opportunity to work with most of their supply bases - Tier 1 and Tier 2, for implementing QS 9000 and the Core Tools (blue book) that was very new to the Indian Automotive supplier.

We have come a long way

Digital Collaboration Software Solutions

All of Omnex's training and implementation products are supported by a digital collaboration software system, providing a comprehensive solution for an Integrated Management System and all of its key processes and activities.

Satisfied Customers

Over the years, Omnex has earned the loyalty of an impressive array of satisfied customers, some with active relationships sustained over more than two decades. Such loyalty has been built on successfully providing business management expertise that has evolved over time to ensure that our clients continue to achieve success, employing solutions that are continually being developed, customized and enhanced or improved to adjust to our clients ever-changing needs.

Omnex's Unique Training Strategy and Methods

Training is provided as "Personalized Learning, focused on competencies" and uses technologies that include Collaboration, Digitalization, and Integration. Omnex uses the latest learning methods so that each competency and learning objective is tracked using pre-tests, concept quizzes, and final exams. With no pass or fail, this approach places learners on a journey of "self-fulfillment".

Our certification courses are well sought after in the industry and every year we train over 21,000 people in Asia alone.

Training will include a "[Digital-Collaboration Platform](#)" software tool, so teams can conduct breakouts collaboratively.
